

CHARGE FACILITY

A CHARGE CARE™ PRODUCT

CHARGE Facility Key Benefits

- **Increased operational efficiency** Elimination of laborious manual reconciliation
- **Direct cost reduction** Reduction of data entry personnel costs.
- **Improved revenue capture** Electronic reconciliation of technical charges.
- **Improved compliance**

Case Study: University Medical Center

As with many hospitals, a University Medical Center found itself reliant on many paper-based, manual processes for charging outpatient facility encounters. To improve operations, the hospital chose CHARGE FACILITY to ease the outpatient procedure documentation process across care teams, ensuring coding compliance and expedited payment. The result? Significantly reduced charge lag and improved billing across a number of departments.

CHARGE FACILITY is MedAptus' charge capture program that automatically captures charges for outpatient operations.

For hospitals interested in accurately and effectively capturing charges for outpatient visits, MedAptus provides **CHARGE FACILITY** - a top-of-the-line automated solution.

CHARGE FACILITY provides:

- Rapid, intuitive charge capture at care delivery
- Complete back-office automation of the reconciliation process
- Seamless integration with the hospital Charge Data Master (CDM)

Designed to integrate seamlessly with our CHARGE PRO solution and all major EHR systems (including Epic, MEDITECH, Cerner, AllScripts and others), this solution eases OPSS compliance concerns and eliminates paper, as well as duplicate entry from charge documentation processes.

CHARGE FACILITY eases and standardizes facility billing by automating the charge creation process across a care team from a clinician workstation.

ENSURING ACCURACY

A key feature of **CHARGE FACILITY** is its ability to translate physician procedural coding on the professional side into appropriate charge data master codes (CDM) for billing.

COMPREHENSIVE REVIEW

CHARGE FACILITY utilizes inbound scheduling feeds to populate end-user schedules and patient demographic information.

Even external professional charge data can be imported from ambulatory EMR systems to aid with
