

BALANCING PHYSICIAN WORKLOADS

INTELLIGENT PATIENT ASSIGNMENT SOFTWARE FOR HOSPITAL MEDICINE

ASSIGNCARE® FOR PHYSICIANS Key Benefits

- Support handoffs and continuity of care
- Better balance workloads
- Ensure safe and quality patient care
- Reduce length-of-stays
- Improve patient satisfaction
- Optimize revenue from finding missed charges
- Reduce administrative time
- Improve care team communications
- Avoid high-risk clinical practices like missed patients
- Collect and analyze individual physician performance and productivity
- Ensure best practices

“We are more organized because of ASSIGNCARE® for Physicians. It’s so much easier for our staff. It just works.”

Practice Administrator
for Top 20 Health System

ASSIGNCARE® FOR PHYSICIANS expertly matches the right patient with the right physician for better continuity of care, improved safety, higher productivity and reduced stress.

Patient assignments are the lifeblood of any hospital medicine operations. Get them right and good things follow. But if they are not optimized and if they overburden rounding operations—numerous problems occur—including missed patients, physician burnout, and added costs from extra tests and extended length-of-stays.

To complicate matters, suboptimal assignments don’t just occur in the morning, but throughout the day as new admissions are added and assigned.

Currently, most hospital medicine operations assign patients manually, sometimes taking as much as 2 hours each day and tying up staff.

None of this makes sense and it adversely affects care.

ASSIGNCARE® FOR PHYSICIANS is a unique, “rules-based” software program that automatically and intelligently assigns patients using customizable protocols.

Not only does it manage physician workloads in the morning, but with its one-of-a-kind **CENSUS MANAGER** technology, it automatically assigns patients throughout the day, thereby ensuring a steady and balanced workload 24/7.

Patient assignments don’t have to be a burden or a nightmare. Let technology do what can’t be done manually — intelligently and automatically process hundreds of calculations so your assignment process is **safer, faster, efficient, balanced, and fair.**

MEDAPTUS

CENSUS MANAGER

Key Benefits

- Maintain census accuracy throughout the day and night
- Improve the accuracy of the attending and consulting physicians in the EMR
- Automatic notification when a physician is assigned a new patient
- Rules-based technology intelligently assigns the appropriate physician for new patients
- Reduce time spent validating the morning census prior to rounding

ASSIGNCARE® FOR PHYSICIANS

ASSIGNCARE for Physicians is a sophisticated software program that expertly matches the right patient to the right physician by applying “rules-based” algorithms.

CENSUS MANAGER

Automatically and intelligently assign patients to physicians *throughout the day* using configurable logic

Just because patient assignments are made first thing in the morning doesn't mean the process ends. What about the call from the ED with a new admission? Who gets that patient? Or what about the call from Cardiology asking for a consult? How do you keep from overloading a physician with new patients?

Introducing **CENSUS MANAGER** - a sophisticated software program that creates a more efficient assignment process and an accurate census — not just in the morning —but throughout the entire day.

This means being able to handle all of the day's census activities quickly and easily. And it means you have the flexibility to assign status levels for the patient, which can help in assigning the next patient coming to the team. **CENSUS MANAGER** also has a HIPAA-compliant notification feature so you will always know when you've been assigned a new or incoming patient.

And because it's part of **ASSIGNCARE® for Physicians**, the census is always accurate and ready for the next day's assignments. No need for handwritten notes, emails or phone calls.

Patient assignments don't just happen in the morning!

Choose **CENSUS MANAGER**

for adding new admissions, transfers and consults to the census all day long so you can keep better track of your patients and physician workloads.

CHARGE MANAGEMENT INTEGRATION

Patients assigned via **CENSUS MANAGER** are automatically added to MedAptus's **charge management** product (**CHARGE PRO**) for seamless charging.
