## Charge Pro

### Integrated Professional Charge Management Software

**Changing regulations, tightening margins, high patient volumes. For medical groups and hospitals to stay solvent and high performing in today's evolving healthcare delivery landscape, every billable charge must be captured or documented with accuracy and timeliness.**

Only medaptus' comprehensive revenue cycle optimization platform delivers measurable return based on seamless service capture and evaluation, streamlined billing operations and reduced administrative overhead.

### Charge Capture, Evolved

Though medaptus got its start as a provider of mobile charge capture for clinicians to capture their billing codes digitally, the platform has radically changed in the past years to support the emerging needs and IT infrastructures of customers. Today medaptus Charge Pro operates as an agnostic software system that has been enhanced and expanded to explicitly manage coding and billing throughput regardless of where charge data originates.

### Limitless Options

While today much of the data that medaptus processes is still generated by medical providers via our smartphone app or web-enabled software, increasingly medaptus solutions operate behind the IT and revenue cycle scenes.

Our Charge Pro platform routinely sits between scheduling, hospital and EHR systems so that our solution is optimally poised to import

\$12,500 avg annual benefit per provider

Capture 100% of revenue opportunities

Scale & streamline coding operations

**Our award winning mobile charge capture solutions are supported on iPhone and Android devices and are interoperable with all commercial EHRs**

and manage charge data from multiple source systems. Once data is received via real-time or batch HL7 feeds, medaptus applies customer-derived rules to stop, review, append and/or automatically transmit data for billing.

## Meeting a Need

Many customers approach medaptus because while they are happy with their EMR investment and also happy with their billing system – they recognize that gaps exist between the two, particularly when supported by different vendors.

Concern about lost charges resulting from inpatient coverage or multiple care settings

A billing office or any department still handling paper in its operations

An EHR struggling to integrate with or talk to the billing system

## Medaptus can help with your organization's revenue cycle process

### Newfound Insights

As a standard part of medaptus' Charge Pro software, a suite of impactful analytical tools enables customers to identify and address trends as identified by our platform. These include such key performance metrics as:

- Timeliness – identifying the departments or resources contributing to higher than desired charge lag (or on the contrary, those that are optimized in their performance)
- Compliance Alerts – tracking the types/classes of charges or rule violations that slow down revenue cycle execution
- Productivity – from providers to coders, get insight into who are the high producers and where operations lagging
