| Capability Area | EHR | Medaptus Assign | Operational Impact |
|---|---|---|---|
| Intelligent Patient Assignment | | Automated assignments using Medaptus' proprietary rules-based engine configured uniquely for each hospital. | Faster assignments evenly balanced across providers; with reduced administrative burden. |
| Rules Engine Flexibility | | Highly configurable rules engine (continuity, geography, attending, handoffs). | Adapt workflows without Epic build delays. |
| Morning Rounds Readiness | | Assignments completed on-time with quality and accuracy. | Reliable, predictable morning rounds for physicians. |
| Automatic Attending-of-Record Updates | | Automated outbound updates to Epic. | Entire hospital knows the correct rounding provider in real time. |
| Operational Reporting | | Hospital medicine–specific reports. | Actionable insights in real-time instead of static data. |
| Patient Attribute and Visual Indicators | | Tracking patients during their hospitalization to ensure optimal intelligent assignment and support clinical/operational workflows for physicians. | Enhanced assignment rules, workload distribution and rounding data critical for physicians. |
| Missed Patient Detection | | Active census reconciliation. | Reduces clinical, financial, and reputational risk. |
| Provider Scheduling Integration | | Real-time scheduling system integration. | Accurate assignments based on who is actually working. |
| Call-Out & Coverage Adjustments | | Instant reassignment and redistribution. | Maintains continuity and fairness. |
| Shift & Role Awareness | | Automatic recognition of shift type and patient eligibility. | Prevents misassignment. |
| Real-Time Census Validation | | Dedicated Census Evaluation & Reconciliation Engine that continuously validates ADT feeds. | Prevents missed patients, ghost patients, and census drift—critical for quality, billing, and compliance. |
| Census Manager /Admit Tracking | | Census Manager module purpose-built for hospitalist admissions. | Eliminates overload, improves fairness, and ensures visibility. |
| Real-Time Admission Load Balancing | | Visual tracking of # admits per provider and patient admission status in real-time. | Prevents provider overload and burnout. |
| New Admission Alerts | | Automated real-time provider notifications. | Faster patient contact and improved throughput. |
| EHR Update After Coverage Change | | Automatic Epic update. | Eliminates manual schedule reconciliation. Ensures enterprise-wide accuracy. |
